No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

M. catarrhalis strain 4223 genomic 200kDa coding sequence SEQ ID NO:6.

Moraxella catarrhalis strain 4223; major outer membrane protein; 200kDa outer membrane protein; antibacterial; immunogenic; infection; otitis media; detection; ds.

Moraxella catarrhalis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as infections, particularly of detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein CG genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein cowards the Escherichia coll host. The present sequence represents the CM. catarrhalis strain 423 genomic 200kDa coding sequence, which is cgiven in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match 100.0%; Score 6141; Best Local Similarity 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The present invention describes an isolated and purified nucleic acid (1) CC that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. CC The 200 kDa outer membrane protein (II) has antibacterial activity and CC can be used in vaccines. (II), and its truncated versions, are used as CC infections, particularly otitis media in humans. (II) is also used as CC antigen in immunoassays for detecting specific antibodies (Ab), and to GC generate Ab. (I) are used for recombinant production of (II) and its CC fragments are used as probes for identifying/cloning 200 kDa protein CC genes from other strains, and for diagnostic detection of M. catarrhalis. CC (I) makes possible production of large amount of recombinant immunogens. CC Expression of truncated versions of (II) reduces toxicity of the protein CC constants the Escherichia coli host. The present sequence represents the CC M. catarrhalis strain 4223 genomic 200kDa gene, which is given in the CC exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                          Query Match

The DNA was isolated from a strain 4223 genomic library in phage lambda EMBL3 by screening with an anti-200 kDa protein guinea pig antiserum. The gene can be used for the recombinant expression of the OMP (for use in vaccines), for the prepn. of hybridisation probes, or may be incorporated into a live vector for use in direct immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

useful New nucleic acid in protective encoding Moraxella catarrhalis tive vaccines and for diagnosis outer membrane protein,

Example 3; Fig 2A-W; 247pp; English.

CC that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and CC ann be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis CC infections, particularly otitis media in humans. (II) is also used as CC antigen in immunoassays for detecting specific antibodies (Ab), and to CC generate Ab. (I) are used for recombinant production of (II) and its CC fragments are used as probes for identifying/cloning 200 kDa protein CC genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. CExpression of truncated versions of II) reduces toxicity of the protein CC composities the protein action of the present sequence represents the CC M. catarrhalis strain 4223 lambdaEMBL3 clone 200kDa gene, which is used CC in the exemplification of the present invention.

Sequence 6973 BP; 2265 A; 1555 C; 1533 G; 1620 Τ, 0 other;

The present invention describes an isolated and purified nucleic acid (I that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as infections, particularly otitis media in humans. (II) is also used as infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its genes from other strains, and for diagnostic detection of M. catarrhalis genes from other strains, and for diagnostic detection of M. catarrhalis genes from other strains, and for diagnostic detection of m. catarrhalis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an isolated and purified nucleic acid (I) CC that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. CC The 200 kDa outer membrane protein (II) has antibacterial activity and CC can be used in vaccines. (II) and its truncated versions, are used as CC infections, particularly otitis media in humans. (II) is also used as CC antigen in immunoassays for detecting specific antibodies (Ab), and to CC generate Ab. (I) are used for recombinant production of (II) and its CC genes from other strains, and for diagnostic detection of M. catarrhalis. CC (I) makes possible production of large amount of recombinant immunogens. CC (I) makes possible production of large amount of recombinant immunogens. CC Expression of truncated versions of (II) reduces toxicity of the protein CC towards the Escherichia coli host. The present sequence represents the CC M. catarrhalis M56 200kDa gene in pKS348, which is given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              망

(1) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis strain Q8 200kDa gene, which is given in the
                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an isolated and purified nucleic acid () that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAF28545 standard;
                                                                                                                                                                                                                                             Genomic library for identifying diagnostic and therapeutic compositions, and for identifying virulence factors, regular elements and drug targets, comprises Moraxella catarrhalis
                  The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AF28514-AAF28554). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large

```

The present sequence is haemagglutinating Moraxella catarrhalis outer membrane protein-106 (OMP106) DNA. The OMP106 is used as a therapeutic and prophylactic vaccine against M. catarrhalis infections of mammals. It is used for diagnosis of bacterial infections and as reagents for clinical or medical diagnosis of M. catarrhalis infections and for scientific research on the properties of pathogenicity virulence and infectivity of M. catarrhalis. It is also used as a probe to identify the presence of M. catarrhalis in biological specimens and to identify other bacteria that encode a polypeptide related to M. catarrhalis OMP106. OMP106-derived polypeptides are used as ligands to detect antibodies elicited in response to M. catarrhalis in fections and also ontibodies elicited in response to M. catarrhalis in fections and also as immunogens for inducing M. catarrhalis infections and also useful in immunoassays to detect M. catarrhalis in biological specimens. Cytotoxic antibodies are useful in passive immunisations against M. catarrhalis.

Sequence 9542 BP; 2966 A; 2104 C; 2098 G; 2374 T; 0 other;

(I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis lesl 200kDa gene, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an isolated and purified nucleic acid (I that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  useful

                                                                                                               Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 11
AAF59129
                                                                                                                                                                                                                                      The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly of this media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents a M. catarrhalis strain 4223 200kba partial nucleotide sequence, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ω

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a Haemophilus influenzae adhesin (Hia) gene from the non-typeable Haemophilus influenzae (NTHi) strain M407. Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus

                                                                                                           2540
                                                                                                                                                                                                                                                                                                                                                                               influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophi influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.

The present sequence represents a Haemophilus influenzae adhesin (Hia) gene from the non-typeable Haemophilus influenzae (NYHi) strain 33. Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       6139

An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. His useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, eppilottitis, septicaemia and ottics media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5719

susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.
                                                                                                                                                                                  Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                  The present sequence represents a Haemophilus influenzae adhesin (Hia) compared from the non-typeable Haemophilus influenzae (NTHi) strain K22. Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an artigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hae favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-learth protein.
                                                                                                                                      Query Match

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Moraxella catarrhalis.
Moraxella catarrhalis
Bacteria; Proteobacteria; gamma subdivision; Moraxellaceae;
Moraxella
1 (bases 1 to 6942)
1 Loosmore, S.M., Sasaki, K., Yang, Y.P. and Klein, M.H.
Recombinant high molecular weight major outer membrane protein of moraxella
